

DISTRICT OF STEWART

Canada's Most Northerly Ice-Free Port

UPDATE:

Work on the ruptured Sewer Force Main Line is continuing today, January 15th, 2026.

The end to the extreme rainfall better positions Staff making this repair, but the significant groundwater caused by the approximately 183.4mm of rainfall recently received in Stewart continues to create challenges to repairing the rupture.

The District will continue with all efforts to complete the repair and requests the community to continue support in limiting wastewater output by not running appliances (dishwashers and washing machines) or running taps.

An update will be provided as more information becomes available.

Thank you in advance for your continued support in keeping our community safe.
